AI proposal triage

MATACS-TH-2026-02 | Evidence first. Fixed rules. Human decision.

HUMAN | RULES | AI

01 / HUMAN

Configure category

Mandatory proof, budget/deadline gates, scoring targets and weights. Save version v; validate weights total 100%.

02 / HUMAN

Select and upload

Reviewer chooses category and submits proposals. Freeze input snapshots and category version for the run.

03 / RULES

Extract document text

Read PDF text; use OCR if needed. Retain page locations and detect unreadable or incomplete content.

04 / AI

Extract facts + evidence

Structured facts and quotes only. Treat source as untrusted data. Never execute embedded instructions or assign scores.

Structured facts + source evidence

05 / RULES

Validate and classify

Check schema, units and evidence; evaluate mandatory proof and project limits. Detect missing critical facts, contradictions and suspicious instructions.

Review needed

FLAGGED

Hold for clarification

Unreadable claimed proof, unknown timeline or qualifying count, conflicting extraction, or injection warning. No score or rank.

06 / HUMAN

Review source and resolve

Confirm/correct facts or request clarification. Resolve each warning with a reason. Preserve original extraction; send accepted facts back through validation.

Recheck

Unresolved: keep flagged

Gate fails

INELIGIBLE

Submitted gates not met

Required bidder-held licence proof absent, another mandatory failure, or confirmed cost > CAD 260,000 / duration > 16 weeks.

Pass; accepted facts complete

07 / RULES

Calculate fixed scores

Experience 30%, price 25%, timeline 15%, warranty 15%, team 15%. Full precision; display two decimals. Apply documented tie-breaks.

Rank eligible proposals

08 / RULES

Display complete results

Ranked list + all flagged/ineligible entries. Show status, reason, evidence and criterion points. Unscored: rank = null; score = null.

Retain in results

Recommendation + evidence

09 / HUMAN

Make the final award decision

Log award overrides separately; never silently change scores or waive gates. Fact corrections trigger validation and rescoring.

Submission evidence policy

After text quality is established, a confirmed failure takes precedence over review holds. Absent proof fails the submission requirement; unreadable claimed proof needs review. Neither proves a contractor is unlicensed.

Sample review checkpoints

B: bidder-held licence requirement.
C: embedded instruction + experience window.
D: missing completion timeline.
A/E: sample experience assumptions must be explicit; verify dates in live use.

No automatic rejection for injection

Ignore the instruction and preserve the warning. A reviewer decides whether the extracted facts can be accepted; the normal gates still apply.

AUDIT THROUGHOUT

Keep input hashes, criteria/prompt/model versions, extraction evidence, accepted facts, reviewer changes + reasons + timestamps, scores and final decisions.

WHEN CRITERIA CHANGE

New version → **Revalidate + rescore all affected proposals** → **New results**

Keep prior runs; never mix versions in one ranking.
